

DebugPrint

Role

tags:
Error handling

Registers in the Traces circular buffer a new entry. The arguments will be presented in tabular form.

Syntax

```
DebugPrint([Value1[, Value2[, Value3[ ... ]])
```

Arguments

Arguments	Type	Default	When ...	Result string
List of values separated by commas	Any	Empty string ("")	Empty	--EMPTY--
			Object	[Object-Type] Object-Name
			Null	--NULL--
			Variant	--VARIANT--
			Array	--ARRAY--
			Boolean	True or False
			Numeric	The numeric value
			Date	The Date value
			String	The string
			Other	(ERROR)

Example

Display debug information.

Next code ...

```
Dim oForm As Object, sString As String, dDate As Date
Set oForm = Application.AllForms("myForm")
sString = "a string"
dDate = DateSerial(2014,5,10)
DebugPrint dDate, sString, oForm, oForm.Name, oForm.IsLoaded
```

... generates next entry in the console:

```
15:08:31 ===>    10/05/2014    a string  [FORM] myForm  myForm    False
```
